

Spam costs money. Your money!

As a company, profit is based on the efficiency by which results are achieved. When your employees waste time every day sorting through their email, separating the junk email from legitimate business email, efficiency is compromised. When your servers and networks are processing and delivering junk email, efficiency is compromised. As efficiency decreases, so does your profit. Let us help you run a more profitable company.

Why FilterMy.Biz?

- Powerful:** Enterprise grade anti spam and anti virus filters remove over 95% of junk email before it even hits your network!
- Convenient:** Setup takes only a few minutes and is hands off from there. No maintenance, no staff, no headaches.
- Efficient:** A small monthly fee, based on the number of users you have, will protect your entire organization from wasted time and network failure due to viruses.

How it Works:

Junk Email:

Our system analyzes all email that enters and runs it through approximately 750 different rules and tests. A score is determined and the email is either deleted or passes through, based on its score. This system is proving to be very effective and you will notice a significant, immediate reduction of junk email.

Anti-Virus:

Using enterprise grade virus filters from Sophos, we eliminate viruses that are attached to email before the virus even gets to your network. More than 300 new viruses are discovered every month, don't become a victim. Our virus filters are updated hourly as new viruses come out so that we can provide your company with ultimate protection. Don't try to rely on software that never gets updated.

Setup:

The setup in order to use our system has been designed to be very quick and requires almost no involvement from your end. In fact, we can do it for you if you prefer. All that is required is a simple change in your DNS to send your email directly to our servers. We then filter the mail and forward it back to you for processing, or, if you prefer, we can also store your email on our server, whichever will work best with your needs.

We understand that companies may have their own requirements or preferences as to how their system is set up. We would be more than happy to work with you and customize the system as you require.

More information about our system can be found on our website or by calling our sales manager.
